

Selective generation and revision

REQUESTED REVISION

Woman gives cup to man  **Man gives cup to woman**

Preserve the characters, their clothing, and the child reading.

2.1 Learn representations

Learn extractors from fixed encoders or downstream tasks / rewards

Illustrative: participants / roles / other

2.2 Measure dependencies

Vary one component's noise; measure other denoising losses.

Does cleaner j help denoise i?

Across noise levels and contexts.

2.3 Jointly optimize generation

Schedules, transformer, module activity

Component noise levels u

Noise levels determine active modules.

2.4 Share and specialize

Across conditional denoising tasks

Sparse attention

Shared / switchable MLPs

Reuse and specialize computations.

Goal: revise selected content while preserving the rest.
